MATERIAL-10: VENEER

How to Apply Polyurethane to Veneer

1. Sand the veneer by hand with 220-grit sandpaper, going with the grain of the wood. This removes spots of dirt and old finish that may still be on the surface. Wipe off the sanding dust with a damp rag.
2. Seal the wood grain by wiping on shellac or a 50-50 solution of polyurethane varnish and mineral spirits with a rag. Let the sealer dry, and then sand the surface again by hand with 220-grit sandpaper. Wipe off the sanding dust. If you're applying a stain, it will seal the wood, so you can omit sealing with shellac or thinned polyurethane.
3. Apply a thin, wet coat of polyurethane, either by brushing or spraying. If you're brushing, deposit material onto a dry surface and brush it with even strokes into one that has already been painted. If you're spraying, move the gun steadily, keeping a uniform distance between the spray tip and the surface. Don't arc it away at the edges.
4. Pop any bubbles that appear with the tip of your paintbrush. They are more likely to appear when you're brushing, especially if you're using a waterborne finish, and you may be able to prevent them by moving your brush more slowly.
5. Let the surface dry until it is no longer sticky, then lightly sand it with 400-grit sandpaper and apply another thin coat. Don't wait more than 24 hours to recoat or the bottom layer may cure. If it does, the fresh polyurethane won't adhere properly.
6. Sand the second coat with 400-grit paper and apply a third. You seldom have to apply more than three coats of polyurethane, but some burl veneers that accept finish unevenly may require more.
7. Give the final coat between 24 to 48 hours to cure, and then rub it down with 0000 steel wool. Spread polishing powder and polish the surface with a coarse rag. Finish up by spreading a coat of wax and buffing it up with a rag, if desired.
