Ingrid-connectedSolarPhoto Voltaic(SPV)systems,solarenergyisfedintothebuildingloads that are connected to the public electricity grid through a service connectionwithsurplusenergybeingfedintothegridandshortfallbeingdrawnfromthegrid. Production of surplus energy may happen when solar energy produced exceedsbuildingloadenergy

demand. This surplusis fed into the grid, when energy demand in the building exceeds solar energy production, energy is drawn from the grid. Grid connected solar PV systems have no battery storage and will not work during grid failure. For buildings with grid-
